This change is the most radical redesign of Photoshop yet. With this new re-envisioned Photoshop CC, Adobe delivers a set of features that truly integrates the desktop into the cloud. This is achieved by re-imagining the interface and experience of Photoshop as a modern web application. To achieve this, Adobe has rebuilt the Photoshop CC from the scratch using a new 3D framework. Also, the new Photoshop has a configurable viewport settings to bring a more natural perspective of the image. The new Photoshop CC will be rolled out globally in 2020. Originally, it is a subscription based product. However, in the near future, Photoshop and Elements will be moving to a new subscription model and Adobe will be offering free upgrade to users. On the occasion of this release, Adobe is going to drop the name of Photoshop to simply named Photoshop. I will provide more details on the new Photoshop below. As I already mentioned, Photoshop is now a web page-based visual editor. The new Photoshop will be powered by the new framework. The new framework takes advantage of the existing HTML5 web technologies to provide a new design-centered web-based editor. With this new editor, the entire visual interface is replaced with a revamped experience that's focused on creating, editing, and sharing. It is a modern, visual-centric experience that includes a new browser viewport, an interactive timeline, a more cooperative multi-panel design, native transitions, and improved tools for collaboration. It is the most comprehensive performance improvement the Photoshop has ever seen.
