Another important feature is the ability to upload to the cloud using Camera Raw, which is powered by Adobe Capture and Adobe Portfolio. In addition to all the features already available in Photoshop and other Adobe products, Camera Raw offers several features to make image editing faster and the Photoshop experience more intuitive. Users may open the Camera Raw interface via the Open dialogs, the File menu, or via the Command/Shortcut button on the application bar, drop images into the workspace, and tap the Editor tab to bring up the various editing and control panels. If you want

to get a new image in the cloud within Photoshop, you may now select an image from your desktop or devices, and any image opened in Photoshop or any of the other Adobe products would display a notification that appears in the top left of the window. Uploading images is also a one-button operation: simply scroll down on your device and select the Photoshop Upload button. Camera Raw would then save the image to your device, and then you are free to work on the image as you wish. Your edits are made in this new interface, and when you're ready to share the image, simply save it back to your computer or device. Access to cloud files is a fundamental part of the future of digital workflows. Combined with other services including Dropbox Sync, Creative Cloud Libraries and Adobe CreativeSync, the integration of Photoshop with the cloud enables a user to start a work in Photoshop, and then continue it in other apps that work with that cloud library, without having to stop and export to a local folder.
